NEBRASKA DEPARTMENT OF AGRICULTURE REPORTS FIFTH CASE OF HIGHLY PATHOGENIC AVIAN INFLUENZA

LINCOLN – The Nebraska Department of Agriculture (NDA) in conjunction with the United States Department of Agriculture’s (USDA) Animal and Plant Health Inspection Service (APHIS) is announcing a fifth confirmed case of highly pathogenic avian influenza (HPAI).

The fifth farm, a small backyard mixed flock, is in Scotts Bluff County.

According to NDA State Veterinarian Dr. Roger Dudley, the farm has been quarantined and the birds have been humanely depopulated and disposed of in an approved manner. Additionally, NDA will be establishing a 6.2-mile surveillance zone, as is USDA policy, around the affected premises. A surveillance zone means poultry producers should be on heightened alert and practice biosecurity measures to protect their flock. These producers should also know the signs and symptoms of HPAI and notify NDA immediately of sick or dying poultry.

Current Status of Impacted Farms

Location	Flock Size	Flock Type	Depopulation	Disposal Method
Merrick County	Small (100 birds or under)	Mixed – Chicken / Waterfowl	Completed	Incineration completed
Butler County – 1	570,000	Broilers	Completed	Compost in progress
Butler County – 2	400,000	Broilers	Completed	Compost in progress
Holt County	Small (50 birds or under)	Mixed – Chicken / Waterfowl	Completed	Incineration completed
Scotts Bluff County	Small (50 birds or under)	Mixed – Chicken / Waterfowl	Completed	Incineration completed

-more-

H5N1 is a highly contagious virus that spreads easily among birds through nasal and eye secretions, as well as manure. The virus can be spread in various ways from flock to flock, including by wild birds, through contact with infected poultry, by equipment, and on the clothing and shoes of caretakers. Wild birds can carry the virus without becoming sick, while domesticated birds can become very sick.

Symptoms of H5N1 in poultry include: a decrease in water consumption; lack of energy and appetite; decreased egg production or soft-shelled, misshapen eggs; nasal discharge, coughing, sneezing; incoordination; and diarrhea. H5N1 can also cause sudden death in birds even if they aren't showing any other symptoms. H5N1 can survive for weeks in contaminated environments.

Poultry owners should report unusual poultry bird deaths or sick birds to NDA at 402-471-2351, or through USDA at 866-536-7593.

Enhanced biosecurity helps prevent the introduction and spread of viruses and diseases including H5N1. NDA and USDA have resources available to help poultry owners step up their biosecurity efforts.

- Know the warning signs of infectious bird diseases like H5N1. Be on the lookout for unusual signs of behavior, severe illness and/or sudden deaths.
- Restrict access to your property and poultry.
- Keep it clean. Wear clean clothes, scrub boots/shoes with disinfectant and wash hands thoroughly before and after contact with your flock.
- If you, your employees or family have been on other farms, or other places where there is livestock and/or poultry, clean and disinfect your vehicle tires and equipment before returning home.
- Don't share equipment, tools, or other supplies with other livestock or poultry owners.
- In addition to practicing good biosecurity, all bird owners should prevent contact between their birds and wild birds, making sure wild birds cannot access domestic poultry's feed and water sources.
- Report sick birds immediately to: NDA at 402-471-2351; the USDA at 866-536-7593; or your veterinarian. Early detection is important to prevent the spread of disease.

According to the Centers for Disease Control and Prevention, the risk to people getting H5N1 infections from birds is low. No human cases of avian influenza viruses have been detected in the United States.

All poultry entering Nebraska must be accompanied by a VS form 9-3 or Certificate of Veterinary Inspection (CVI, or health certificate). If you are considering moving an animal into Nebraska from an affected state, please call 402-471-2351 to learn more. Nebraska poultry owners wanting to ship poultry out of state should consult the state veterinarians of the destination states for import requirements.

For more information about avian influenza, visit NDA's website at <https://nda.nebraska.gov/animal/avian/index.html> or the USDA's website <https://www.aphis.usda.gov/aphis/>. Additional information on biosecurity for backyard flocks can be found at <http://healthybirds.aphis.usda.gov>
