

Soil Survey of Red Willow County, Nebraska, 1967. USDA NRCS and Conservation and Survey Division, UNL.

Configuration of the water table, Spring 1979, McCook Quadrangle, Nebraska. Conservation and Survey Division, UNL. GM-54.

below the surface.

used.

below the surface.

on pesticide use.

The vulnerability of groundwater contamination was determined using soil properties and depth to groundwater as indicated in general on pesticide labels. Areas on this map may have dissimilar soil and groundwater characteristics from those generally identified for that area. More detailed information can be obtained from:

Lincoln, NE 68588-051 (402) 472-7537 (soil and groundwater data)

> Nebraska Department of Agriculture **Bureau of Plant Industry - Pesticide Program** Box 94756 Lincoln, NE 68509-4756 (402) 471-2394 (pesticide labels and regulations)

## **Pesticides and Groundwater** An Applicator's Map and Guide to Prevent Groundwater Contamination

# **Red Willow County**

Sand, loamy sand and sandy loam soils with little organic matter and a water table less than 30 feet below the surface. These areas have a high vulnerability for groundwater contamination.

### Silty and loamy soils with a water table less than 30 feet

These areas have a moderate vulnerability to groundwater contamination. Even though the soils restrict the downward movement of pesticides, the water table is less than 30 feet below the surface and caution should be

### Silty and loamy soils with a water table greater than 30 feet

These areas have a slight vulnerability to groundwater contamination.
